

Sales Updation

We need to record the sales date wise in xero and daily reporting sheet. We need to record the Sales through Shopify and we prepare the Shopify sales sheet through Chat GPT

Required Documents

- Net payment by Order
- Total Sales by Order

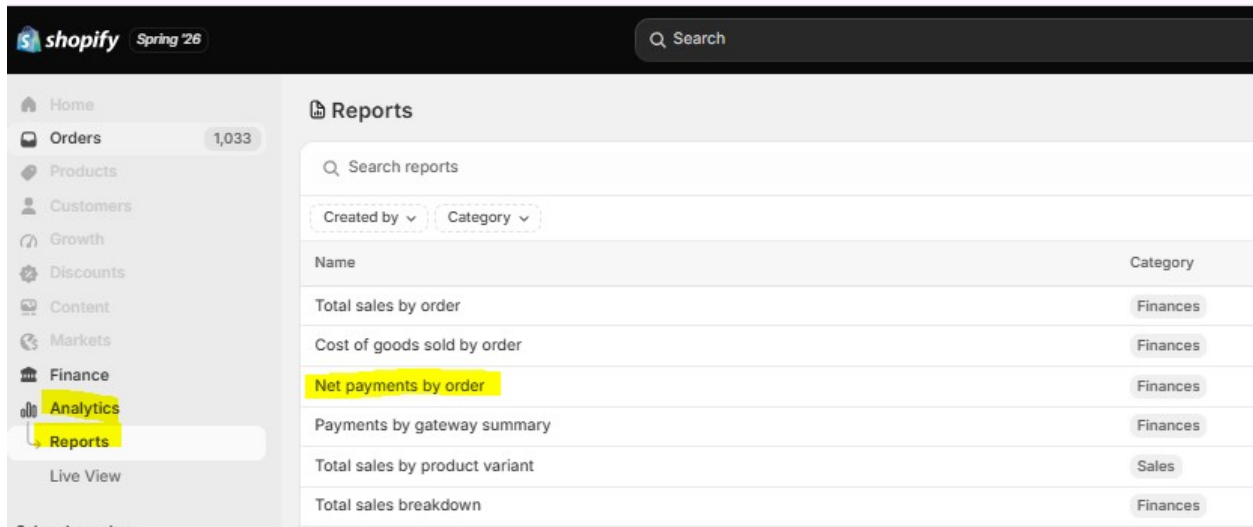

Source

- Shopify
- Chatgpt

Downloading the Reports from Shopify

We need to download the following two reports from Shopify. To login Shopify Credentials files are saved in Slack Channel.

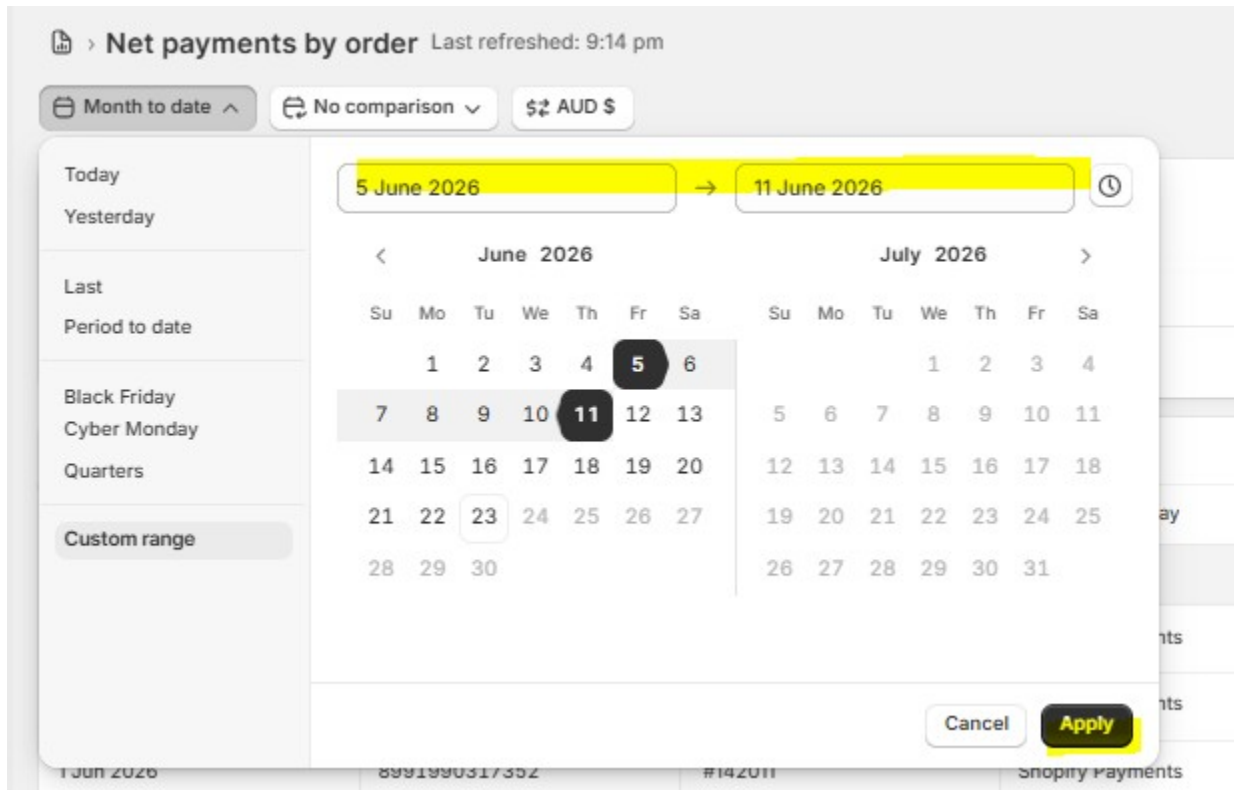

Go to Analytics > Reports > Net Payments by Order

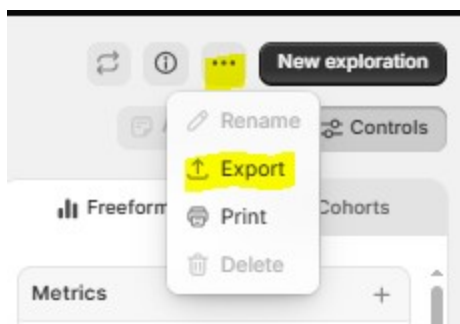

The screenshot shows the Shopify admin interface. The top navigation bar includes the Shopify logo, the text 'Spring '26', and a search bar. The left sidebar contains a list of navigation items: Home, Orders (1,033), Products, Customers, Growth, Discounts, Content, Markets, Finance, Analytics, and Reports (highlighted in yellow). Below the sidebar, the 'Reports' section is displayed. It features a search bar for reports and two dropdown filters: 'Created by' and 'Category'. A table lists various reports with their names and categories. The 'Net payments by order' report is highlighted in yellow. Other reports include 'Total sales by order', 'Cost of goods sold by order', 'Payments by gateway summary', 'Total sales by product variant', and 'Total sales breakdown'.

Name	Category
Total sales by order	Finances
Cost of goods sold by order	Finances
Net payments by order	Finances
Payments by gateway summary	Finances
Total sales by product variant	Sales
Total sales breakdown	Finances

Now Select the date range and click on Apply

Click on three dots and then Export

Click on Export

Export report ⓘ

×

Select a format:

☒ Comma Separated Values (CSV)
Best for importing into spreadsheets

☐ Extensible Markup Language (XML)

☐ JSON Lines (JSONL)

☐ Apache Parquet

Specify the results you want:

☒ All results from the data query
Can be more than 1000 rows

☐ Only results displayed in the report

Created by Category

Name

Cost of goods sold by order

Total sales by order

Net payments by order

Payments by gateway summary

Total sales by product variant

Total sales breakdown

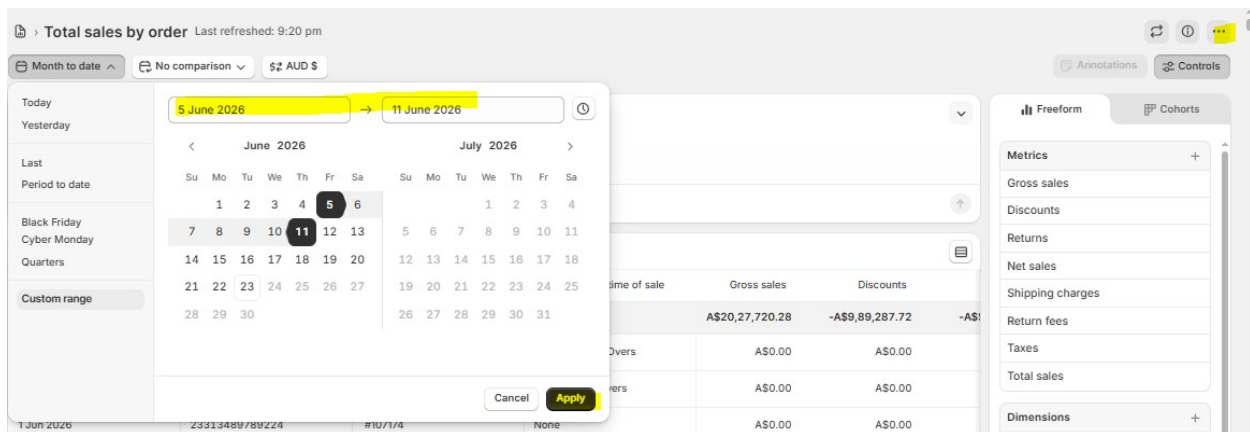

Orders over time

Returns over time

Items ordered over time

Net sales by order

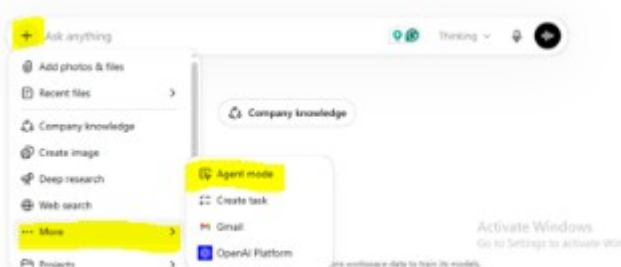

Now Select the date range and click on Apply and Export the same

Process to Prepare Sales Sheet

Sales Sheet are prepared using Chatgpt in Agent mode — <https://chatgpt.com/>

1. Click + > More > Agent mode.

Give Chatgpt the prompt below along with all the files you downloaded. Also make sure to specify the following:

- Mention Each country Sales, Refunds Shipping information separately

You are an accounting assistant.

You are provided with two CSV files for a given date range:

1. **"Net payments by order"** (authoritative for Payment Gateway, Billing Country, and Net Payments)
2. **"Total sales by order"** (authoritative for Net Sales, Shipping Charges, and Taxes)

Your task is to **fully reconcile these two reports** and produce an **Excel workbook** with:

- **JournalEntriesDaily** (one row per day)
- **Summary** (export totals by country for the entire period)

Accuracy is critical. All figures **must tie back to the Net payments by order report**.

1. Base Dataset & Join Logic (CRITICAL)

- Use **Net payments by order** as the base dataset.
- Aggregate **Net payments by order + Day**.
- Capture **Payment gateway** and **Billing country** from the Net payments report.

- Aggregate the Total sales by order report by **Order name + Day**, summing:

Net sales

Shipping charges

Taxes

- **Join the two datasets on BOTH:**

Order name

Day

Never join on Order name alone.

Billing country and gateway must always come from the Net payments report.

Any missing sales values after the join should be treated as zero.

2. Normalize Payment Gateways

Normalize gateway names using the Net payments report:

Any value containing “**afterpay**” → **Afterpay**

Any value containing “**paypal**” → **PayPal**

- Any value containing “**shopify**” → **Shopify Payments**

This ensures gateways such as “**Afterpay (New)**” are not dropped or misclassified.

3. Country Classification

- Use **Billing country from Net payments by order** as the single source of truth.

- Classify orders as:

Domestic → Billing country = Australia

Export → All other countries

Export countries to report separately:

- United States
- New Zealand
- Canada
- United Kingdom
- Singapore
- Bulgaria
- Hong Kong
- Taiwan

Any other country goes into an “**Other**” bucket.

4. Domestic (Australia) Calculations (GST-Inclusive Source Data)

For **positive net sales**:

- **Sales Revenue (Australia, excl. GST)** = Net sales ÷ 1.1

- **GST on Sales** = Net sales ÷ 11

For **positive shipping charges**:

- **Shipping (Australia, excl. GST)** = $\text{Shipping} \div 1.1$

- **GST on Shipping** = $\text{Shipping} \div 11$

For **refunds** (Net sales + Shipping < 0):

- **Refunds (Australia, excl. GST)** = $(\text{Net sales} + \text{Shipping}) \div 1.1$

- **GST on Refund** = $(\text{Net sales} + \text{Shipping}) \div 11$

- **Total GST Payable (Australia)** =

GST on Sales

GST on Shipping

GST on Refund (negative)

5. Export Calculations (No GST Adjustments)

For each export country **per day**:

- **Sales Revenue (Country)** = sum of positive Net sales
- **Shipping (Country)** = sum of positive Shipping charges
- **Other Tax (Country)** = sum of Taxes
- **Refunds (Country)** = sum of negative Net sales + negative Shipping

No GST calculations apply to exports.

6. Payment Gateway Totals (Daily)

For each day, calculate:

- Shopify Payments total
- PayPal total
- Afterpay total

These totals **must match exactly** the Net payments by order report when grouped by day and gateway.

7. Rounding / Reconciliation Check (MANDATORY)

For each day:

- **Expected Total** = Net sales + Shipping charges + Taxes (from joined dataset)
- **Payments Total** = Sum of Net payments (from Net payments report)

Calculate:

Rounding = Payments Total – Expected Total

- Rounding should be **only minor cents-level differences**
- Large differences indicate a reconciliation failure

8. Output: JournalEntriesDaily Sheet

One row per day with columns in this exact order:

1. Date
2. Shopify Payments
3. PayPal
4. Afterpay
5. Sales Revenue (Australia)
6. Shipping (Australia, excl. GST)
7. GST on Shipping
8. GST on Sales
9. Refunds (Australia, excl. GST)
10. GST on Refund
11. Total GST Payable

Then for **each export country (plus Other)**:

- Sales Revenue (Country)
- Shipping (Country)
- Other Tax (Country)
- Refunds (Country)

Final column:

- **Rounding**

Ensure:

- All Australia figures are **GST-exclusive**
- Export figures tie back to Net payments by order
- Total debits equal total credits per day (after rounding)

9. Summary Sheet

For the **entire period**, list for each export country (and Other):

- Total Sales Revenue
- Total Shipping
- Total Other Tax
- Total Refunds

10. Audit Expectations

Before finalizing:

- Verify **each country per day** ties back to Net payments by order

- Verify gateway totals per day match Net payments by order
- Confirm no country leakage between days
- Confirm rounding is immaterial

Only provide the Excel file **after all checks pass**.

 **Net payments by order - 2026-06-...** 
Spreadsheet

 **Total sales by order - 2026-06-05 -...** 
Spreadsheet

You are an accounting assistant.
You are provided with two CSV files for a given date range:
Please prepare for 5th June to 11th June and ensure to mention each country detail separately
"Net payments by order" (authoritative for Payment Gateway, Billing Country, and Net Payments)
"Total sales by order" (authoritative for Net Sales, Shipping Charges, and Taxes)
Your task is to fully reconcile these two reports and produce an Excel workbook with:

  Agent  Apps 

Thinking   

Chatgpt will provide below file you need to download the same

Net payments by order - 2026-06															
ADY FILTER MODE AVERAGE: -1.462148541 COUNT: 378 SUM: -551.23															

Similar way we need to match the sales and refunds of each country. If you found any variance between Output file and Source file(Net Payment by order) you can make changes manually in Output file if you face difference between the sum of Sales + Shipping in Output file with Gross Sales of Net payment by order you can make changes in only Sales amount keep shipping amount as it is.

If you face variance in refund you can make changes in refunds amount.

After matching the Sales of each country make sure to make following changes in Sheet

GST Payable is sum of GST on Shipping, GST on sales and GST on refunds but we need to edit this as we need to show GST on refunds separately in JE

A	B	C	D	E	F	G	H	I	J	K
Date	Shopify Payments	PayPal	Afterpay	Sales Revenue (Australia)	Shipping (Australia, excl. GST)	GST on Shipping	GST on Sales	Refunds (Australia, excl. GST)	GST on Refund	Total GST Payable
2026-06-05	35321.16	7127.47	2060.29	3092.036364	251.38	25.14	309.20	(54.55)	(5.45)	328.89
2026-06-06	39813.3	6494.41	1682.93	3041.663636	262.27	26.23	304.17	(98.19)	(9.82)	320.57
2026-06-07	38831.9	6397.79	2321.27	4160.763636	327.59	32.76	416.08	(23.18)	(2.32)	446.52
2026-06-08	41412.33	5804.17	2481.62	2484.172727	230.07	23.01	248.42	(142.46)	(14.25)	257.18

After matching the output sheet we need to give this to Chatgpt again with new prompt to prepare Journal entry which we need to record in Xero with following instructions as well

Refunds should be separately mention for each country

Rounded off amount should be small.

JournalEntriesDaily_2026-06-05_to...
Spreadsheet

You are an accounting assistant.

I will upload a weekly sales file (for example, journal_entries_week.xlsx) containing columns such as Date, Afterpay_Clearing, Paypal_Clearing, Shopify_Clearing, Sales_Revenue_... by country, Shipping Ex GST, Shipping_<Country>, GST_Payable, Other_Tax_<Country>, Refund Ex GST, GST on Refund, and Refund_<Country>.

Using this file:

Agent
Apps

Thinking

You are an accounting assistant. I will upload a weekly sales file (for example, journal_entries_week.xlsx) containing columns such as Date, Afterpay_Clearing, Paypal_Clearing, Shopify_Clearing, Sales_Revenue_... by country, Shipping Ex GST, Shipping_<Country>, GST_Payable, Other_Tax_<Country>, Refund Ex GST, GST on Refund, and Refund_<Country>. Using this file: 1. For each date, create debit journal lines for: Shopify Clearing (Account 251), Afterpay Clearing (Account 253), and PayPal Clearing (Account 252) using the corresponding columns. A single "Refunds" line (Account 204) equal to the sum of Refund Ex GST plus all Refund_<Country> columns. If GST on Refund is non-zero, add a "GST on Refund" line (Account 820) for that amount. 2. Create credit journal lines for: "Shipping Income - AU" (Account 254) using Shipping Ex GST. "Product Revenue - AU" (Account 257) using Sales_Revenue_AUS plus Refund Ex GST (add the refund amount back to sales). "GST" (Account 820) equal to Total_GST_Payable plus the sum of all Other_Tax_<Country> columns. "Product Revenue - <Country>" lines for each known country (Accounts 258, 259, 261, 262, 265, etc.) using Sales_Revenue_<Country> plus Refund_<Country> (add refunds back to sales). A single "Shipping Income - Other" (Account 250) equal to the sum of all Shipping_<Country> columns. 3. New country

handling (important): If sales appear for a country that does not have a predefined country-specific GL account, record the entire sales amount plus any related refund amount to: GL: "Product Revenue – Others" Do not create a new country GL automatically; always use Product Revenue – Others for new/unmapped countries. 4. Rounding: Calculate the difference between total debits and total credits excluding refunds. Add a "Rounding" line (Account 860) on the side necessary (debit or credit) only to balance minor differences. 5. Output: Produce an Excel file with columns: Date, Account Code, Description, Debit, Credit List day-wise journal entries for the entire week. Ensure each day balances exactly. Please generate this Excel workbook for the entire week and provide it as a downloadable file.

Download the Output file from Chatgpt

rounding line (Account 860) where needed.

You can download the completed journal file here:
